Economic and social overview of Latin America and Caribbean

Meeting of the Regional Coordination Mechanism for Latin America and the Caribbean - Santiago, 24 January 2013

Antonio Prado, Deputy Executive Secretary
Contents

• The region in the context of the global crisis: recent trends in economic and social development

• Long-run challenges to achieve structural change for equality
Crises have traditionally cut deep into the social fabric in the region.

Source: ECLAC, on the basis of special tabulations of household surveys
There has been a clear reduction in inequality since 2002, and this continued in 2011.

LATIN AMERICA (18 COUNTRIES): GINI COEFFICIENT, 2002-2011 AND 2010-2011

Source: Economic Commission for Latin America and the Caribbean (ECLAC), on the basis of special tabulations of household surveys conducted in the respective countries.

b Data for urban areas in Argentina. Data for 2010 refer to figures for 2009 in Brazil and Chile.
This crisis current is different: a recession caused by a financial crisis arising from private over indebtedness

- Recessions of this sort are longer and impact more heavily on output and employment.
- Recoveries are precarious and highly vulnerable to economic or financial volatility.
- Necessary private debt reduction takes place in periods of slack economic activity and asset value slippage.
- Deleveraging and recomposition of private savings make monetary stimulus measures less effective.
- Emerging economies and South-South trade have been key in global growth
Since the beginning of this crisis, Latin America and the Caribbean showed a certain resilience.

### Downside
- Trade contraction, especially towards Europe and China
- Adverse climate factors (soy)
- Insufficient investment limited the growth capacity (supply)
- Some exchange rate volatility (Brazil and Mexico)
- Lower financial inflows to the region

### Upside
- GDP growth of 3.1% (above the global average of 2.2%) in 2012
- Fall in unemployment (to 6.4%) and an increase in average wages
- Accommodative monetary policy and continued reserve accumulation
- Increased investment and consumption
- Fiscal prudence
External context 2012

- Financial, fiscal and competiveness imbalances in the **Euro area** were associated with:
  - A recession in the majority of the countries of the EZ, with economic growth of -0.5%
  - A slow process of joint problem solving, although with the decision of the ECB to intervene under certain conditions
  - Financial instability, though with improvements in the risk premiums in the EZ during the second half

- Slowdown in **China**, from 9.2% in 2011 to 7.7% in 2012
- Modest growth in the **USA**, between 1.8% and 2.1%
- Absence of shocks in the oil market
Global economic growth decelerated

GLOBAL GDP GROWTH BY REGION, 2010 – 2013
(in percentage)

Source: Economic Commission for Latin America and the Caribbean (ECLAC), based on UN/DESA.
a/ Estimate.
b/ Projection.
Regional GDP grew by 3.1% in 2012, above the global average (2.2%).

Source: Economic Commission for Latin America and the Caribbean (ECLAC), based on official figures.

a Figures for 2012 correspond to estimations.
The majority of Latin America countries posted growth above 3.1% in 2012

LATIN AMERICA AND THE CARIBBEAN: GDP GROWTH RATES, 2012

\(^a\) Figures for 2012 correspond to estimations.
FDI inflows remained above 120 billion dollars

**Source:** Economic Commission for Latin America and the Caribbean (ECLAC), based on official figures.

*a* Figures for 2012 correspond to estimations.
Inflation slowed, with some exceptions

(Rate of change over twelve months)
International reserves accumulation continued throughout the region, though at a slower rate than in 2011.
Some decline in commodity prices, but with increased volatility

INTERNATIONAL PRICE INDICES OF COMMODITIES AND MANUFACTURES, 2008-2012
(2005=100, three month moving average)

Source: Economic Commission for Latin America and the Caribbean (ECLAC), based on figures from the United Nations Conference on Trade and Development (UNCTAD) and the Netherlands Bureau for Economic Analysis (CPB).
Exchange rate volatility increased in Brazil and Mexico, with a greater diversity in exchange-rate trajectories.

**Nominal Exchange Rate, Jan 2008 – Nov 2012**
(National currency per dollar, index 01/01/2008=100)

Source: Economic Commission for Latin America and the Caribbean (ECLAC), based on official figures.
Although the trade channel was most affected, net financial flows to the region also declined.

LATIN AMERICA AND THE CARIBBEAN: GROSS CAPITAL FLOWS, 2008 – 2012\(^a\)

*(In millions of dollars)*

---

**Source:** Economic Commission for Latin America and the Caribbean (ECLAC), based on official figures.

\(^a\) Figures for 2012 correspond to estimations.
In contrast with Latin America, the public debt situation in the Caribbean is a source of vulnerability.

**LATIN AMERICA AND THE CARIBBEAN: PUBLIC DEBT AS A PERCENTAGE OF GDP, 2011-2012**

Source: Economic Commission for Latin America and the Caribbean, based on official figures.

*a* Figures for 2012 correspond to: September for Latin America, Bahamas and Belize; August for Suriname; June for Jamaica and Trinidad and Tobago; and March for Barbados.
The rise in consumption reflected improved labour market conditions: unemployment fell (to 6.4%) and wages increased.

Balance, perspectives and challenges
In 2013, external demand will not be a source of dynamism

- **European Union**
  - Solvency problems persist both in terms of public debt and in the financial system, as well as insufficient external adjustment
  - Low growth and a possible recession in 2013
  - Institutional changes (fiscal union and a unified banking supervisor) will take time

- **United States:**
  - Liquidity will continue to expand
  - Labour, housing and banking solvency indicators suggest possibilities of increased growth in 2013
  - There remains a risk of the fiscal cliff

- **China**
  - Indicators suggest growth similar to or greater than that of 2012: 7.9% in 2013 compared to 7.7% in 2012
But a slight uptick in growth is predicted for the region (3.8%) in 2013.
With a recovery in some countries and a small slowdown in others

**Source:** Economic Commission for Latin America and the Caribbean (ECLAC).

* Projection
The Caribbean will also grow, at 2.0%, but vulnerabilities remain

Source: Economic Commission for Latin America and the Caribbean (ECLAC)

Projection
In the short term

The role of domestic demand (national and intra-regional) should be strengthened and expanded, in order to:

- Grow to achieve equality (through employment and wages)
- Enhance investment dynamics
- Avoid internal macroeconomic disequilibria (inflation or financial bubbles)
- And external disequilibria (increasing current account deficits)
- In the Caribbean: ensure fiscal consolidation, but with social protection
- Strengthen regional demand through intra-regional trade
Longer-term challenges: structural gaps to be closed

- Inequality
  For the first time in recent history there have been advances in combating inequality.

- Investment
  Investment, at 23% of GDP, is insufficient for development.

- Productivity
  Closing the external gap (with the technological frontier) and the internal gap (between sectors and actors).

- Taxation
  Regressive tax systems; weak non-contributory pillar.

- International linkages
  Risk of “lock-in” of the export structure, with low value added and little investment in technology.

- Environmental sustainability
  Move towards sustainable production and consumption patterns.

- In order to move towards productive convergence, policymakers must look beyond the price boom: economic policies based on a **relevant, long-term, sustainable vision at the macroeconomic, productive and territorial levels.**

- To take advantage of the opportunities provided by the international context, exports must have a **higher value added and knowledge content**, with the focus on **diversification of production**, integration of **sustainable production processes**, re-evaluation of **global and regional partnerships** and strengthening **open regionalism.**

- Consensus on priorities and respective financing: a **fiscal covenant** with a redistributive impact – with access to **innovation, job security and internalization of externalities.**

- New equation: **State-market-society.**
Risk of lock-in based on static comparative advantages

(En porcentajes del total)
Productive structure and employment: concentrated in low-productivity sectors

LATIN AMERICA (18 COUNTRIES): STRUCTURAL HETEROGENEITY INDICATORS, AROUND 2009
(Percentages)

Access to financing for development for middle-income countries

• The focus on *per capita income* does not reflect the broad and multi-faceted nature of the development process
• ECLAC proposes an alternative approach based on *structural gaps* must be adopted
• This implies:
  • Focusing cooperation and financing towards development, not only poverty reduction
  • Re-thinking the role and integration of middle income countries in the system of regional cooperation
  • New political dialogue at the global and regional levels
Strengthening the regional integration agenda

- Intraregional trade, development of value chains, investment and infrastructure
- Harnessing strategic opportunities with Asia, especially China
- Enhancing the regional financial architecture
- Closer regional cooperation to tackle global challenges (global governance, financing for development, Rio+20, development agenda beyond 2015).
ECLAC’s proposal: structural change for equality

- Close economic and social gaps, both internal and external
  - Progress towards more knowledge-intensive activities
  - Reduction of production and territorial heterogeneity

- Spread throughout the economic and social structure:
  - Production and technology capabilities
  - Ample job opportunities and quality employment
  - Social protection with universal access
  - Environmental sustainability in the context of the technology revolution

- Strengthen the role of the State as a guarantor of rights and driver of policies for sustainable economic and social development
