CLASSIFICATION ACTIVITIES FOR TIME-USE STATISTICS

- A tool to plan, carry out, process and disseminate statistics and indicators on time use for its analysis, and public policies and programs with a gender perspective.
- Hierarchical classification of all activities that the general population may spend time on during the 24 hours of a day.
- Its main purpose is to provide a set of activity categories that can be utilized in producing meaningful statistics on time use.
- Help obtain consistent statistics, which are comparable across countries.

International: ICATUS

Regional: CAUTAL

NACIONES UNIDAS

CEPAL

CLASSIFICATION ACTIVITIES FOR TIME-USE STATISTICS

Time use classifications should

- *Be detailed enough to identify separately activities mainly undertaken by women or by men.*
- *Allow the distinction between market work, non-market work, domestic activities and volunteer work and enable the provision of data that can be linked to official statistics emanating from the SNA and labour statistics frameworks.*

NACIONES UNIDAS

CEPAL

ICATUS

International Classification of Activities for Time-Use Statistics

- Uses SNA as a basic framework
- Distinguishes between:
 - productive activities within SNA
 - productive activities outside SNA
 - personal activities.
- Is under revision
 - issued as a “trial”
 - reflect comments received
 - update terminology

<http://unstats.un.org/unsd/demographic/sconcerns/tuse/>

NACIONES UNIDAS

CEPAL

CAUTAL

Classification of Time Use Activities for Latin America and the Caribbean

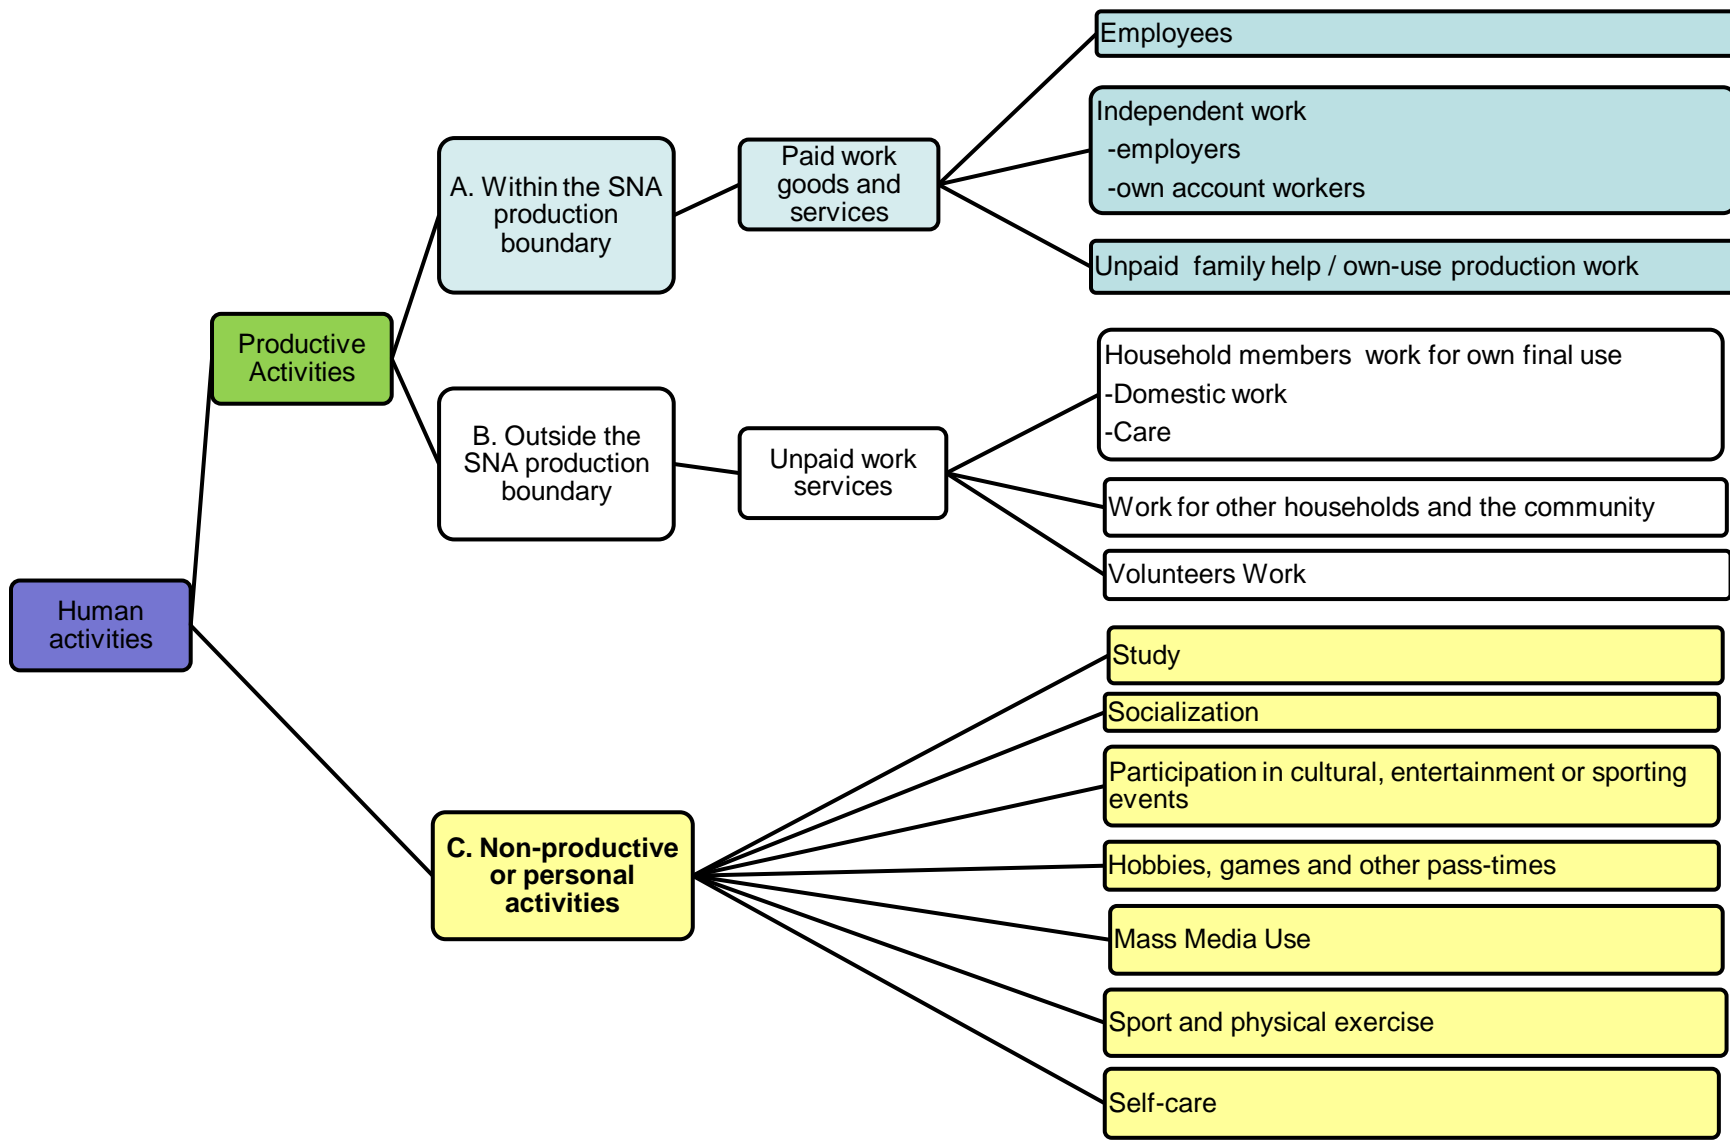

Guiding criteria: the General Production Boundary and the SNA boundary determine the three important categories of its structure:

- ✓ Paid Work
- ✓ Unpaid Work
- ✓ Personal Activities

It is harmonized with the conceptual framework of the System of National Accounts, the new standards for labour statistics that have widened the concept of work and takes as reference the ICATUS 2012.
