ECLAC Economic Commission for Latin America and the Caribbean

Third meeting of the Statistical Conference of the Americas of the Economic Commission for Latin America and the Caribbean

Santiago, Chile, 1 – 3 June 2005

OSILAC: OBSERVATORY FOR THE INFORMATION SOCIETY IN LATIN AMERICA AND THE CARIBBEAN

OSILAC is the Observatory for the Information Society in Latin America and the Caribbean; its main goal is data centralization and harmonization to analyse the state of Information Society development in Latin America and the Caribbean. The Observatory has the purpose to assist the National Statistical Organizations to collect indicators about Information and Communication Technologies (ICT) in the region. OSILAC promotes an international platform on ICT statistics, aiming at:

- (1) a more coherent centralization of data, indicators, methodologies and the networking of qualitative information from all the region;
- (2) the normalization and harmonizing of ICT-related indicators gathered at the sub-regional, national and local level, and
- (3) increasing and improving the quantity and quality of ICT data gathered across the region.

Background

The creation of OSILAC was announced during the second meeting of the Statistical Conference of the Americas, in Santiago de Chile, June 18th to 20th, 2003. The project is a joint effort between the United Nations Economic Commission for Latin America and the Caribbean (UNECLAC) and the Institute for Connectivity in the Americas (ICA) of the International Development Research Centre (IDRC). In its second phase, the European Commission, through the project @LIS, and the Pan Americas program of IDRC joint the initiative.

OSILAC is linked to the process of the World Summit on the Information Society (WSIS): <u>www.itu.int/wsis</u>. The first phase of WSIS took place in Geneva on December 2003 and the second will take place in Tunis in November 2005. The Plan of Action of WSIS makes a number of suggestions concerning the development of statistical indicators for benchmarking and performance evaluation, to follow up the implementation of the Plan of Action and to track global progress in the use of ICT (Plan of Action WSIS, 12 December 2003: "E. Follow-up and evaluation n.28)

Advances

OSILAC, during the first phase, has reached the following achievements:

- i) A database has been developed, consisting on information on the main indicators and statistics which show the state of Information Society technologies. This database is constantly being improved and extended.
- ii) A meta-data questionnaire was developed to take inventory of information society statistics in National Statistical Organizations. 20 countries from the 33 countries from Latin America and the Caribbean completed the questionnaire. A similar exercise has been carried out in OECD countries, Africa, Asia-Pacific and Western Asia, based on OSILAC's methodology.
- iii) A workshop on Information Society Measurement for Latin America and the Caribbean was organized on November 3rd and 4th in Santiago de Chile, in which 17 countries participated: 10 from South America, 2 from Central America and 5 from the Caribbean. During the workshop a list of core questions was agreed and recommended to be included in household and business surveys. This list was discussed together with proposals from other regions to produce a final list, which was presented in the Thematic Meeting of the World Summit on the Information Society, held in Geneva, 7-9 February 2005.
- iv) Attendance at the Thematic Meeting of the World Summit on the Information Society, held in Geneva, 7-9 February 2005. The input from the different regional exercises was presented and discussed. A final list of core indicators for measuring ICT was presented as proposal for the National Statistical Organizations (see Annex).
- v) A document containing the revision of instruments and questions used by the region's National Statistical Organizations was produced to measure Information Society development: see "Toward an Information Society measurement instrument for Latin America and the Caribbean: getting started with Census, household and business surveys". This document compiles the revision of census, households and business surveys in countries of the region which have integrated ICT questions, as well as a proposal and analysis of possible questions for a measurement instrument.
- vi) A benchmarking document on the World Summit on the Information Society (WSIS) Plan of Action in Latin America and the Caribbean was produced. This document contains more than 100 graphics and tables, showing the status of penetration and use of ICT in the region.
- vii) Together with REGULATEL and COFETEL from Mexico, OSILAC contributed to the realization of a workshop in Mexico City, the Methodological Workshop on Telecommunications Regional Indicators System (SIRTEL) that took place from March 29th to April 1st, 2005. In this workshop a core set of telecomm indicators was discussed to be included in a regional database prepared by COFETEL, as well as definitions and metrics and the possibility of their collection.
- viii) OSILAC acts as a regional clearing house for ICT statistics by collaborating with National Statistical Organizations in the region, sharing documents, collecting and attending questions regarding methodologies, collecting information on metadata included in questionnaires and data produced by their surveys.

OSILAC Second Phase – Objectives:

- Develop capacities among technical staff of the National Statistical Organizations and other agencies in charge of ICT issues, on methodologies and techniques required to collect and process data related to information society. OSILAC carries out capacity building missions to interested Statistical Organizations from the region to work on the implementation of ICT statistics.
- ii) Foster the active participation of the National Statistical Organizations in the development of methodologies through online discussion on related topics.
- iii) Carry out a regional workshop on capacity building and to discuss methodologies for the collection of statistical information on ICT.
- iv) Elaborate methodological studies and conceptual documents on Information Society measurement by building methodological and conceptual frameworks in an interactive and participative way to implement ICT statistics in surveys held by countries in the region, as well as contributing and feeding to the global discussion.
- v) Elaborate benchmarking documents containing data produced by the region to illustrate the state of the art of Information Society development.
- vi) Continue extending the statistical database on ICT, mainly updating and detailing penetration indicators, and entering new indicators on usage, produced by the Statistical Organizations and other national and regional institutions.

ANNEX: PROPOSED CORE LIST OF INDICATORS

(After Geneva's meeting, 7-9 February 2005)

Core indicators on access and use of ICTs by households and individuals

Basic core	
HH-1	Proportion of households with a radio
HH-2	Proportion of households with a TV
HH-3	Proportion of households with a fixed line telephone
HH-4	Proportion of households with a mobile cellular telephone
HH-5	Proportion of households with a computer
HH-6	Proportion of individuals that used a computer (from any location) in the last 12 months
HH-7	Proportion of nouseholds with internet access at nome
	I coation of individual use of the Internet from all locations in the last 12 months
1111-5	Response categories:
	• At none
	• At work
	Place of education
	 At another person's home
	Free Public Internet Access Centre (specific denomination depends on national practices)
	Charged Public Internet Access Centre (specific denomination depends on national practices)
	Other
HH-10	Internet activities undertaken by individuals in the last 12 months
	Response categories:
	For getting information
	 About goods or services
	 Related to health or health services
	 From government organisations/public authorities via websites or e-mail
	 Other information or general Web browsing
	For communicating
	 Purchasing or ordering goods or services
	 Internet banking or other financial services
	For education and learning
	 For dealing with government organisations/public authorities
	For leisure activities
	 Playing/downloading video or computer games
	 Obtaining movies, music or software
	 Reading/downloading electronic books, newspapers or magazines
	 Other leisure activities
Extended	
HH-11	Proportion of individuals with use of a mobile telephone
пп-12	Proportion of households with access to the internet by type of access from nome
	• Response categories should allow an aggregation to narrowband and broadband, where
	proadband will exclude slower speed technologies, such as dial-up modern, ISDN and most
HH_13	Zo mobile phone access, and which will usually result in a speed of at least 256 KDI/S.
пп-13	Response categories:
	• at least once a day
	 at least once a wask but not swart day
	• at least once a week but not every day
	 at least once a month but not every week
	less than once a month
Reference	indicator
HH-R1	Proportion of households with electricity

1. Since electricity is not specifically an ICT commodity, but important nevertheless for developing countries prerequisite for using ICT, it is not included in the core list, but included as a reference indicator, just like the number of households, population, GDP etc. will be.

Core indicators on access and use of ICTs by businesses

Basic core		
B-1	Proportion of businesses using computers	
B-2	Proportion of employees using computers	
B-3	Proportion of businesses using the Internet	
B-4	Proportion of employees using the Internet	
B-5	Proportion of businesses with a website (or web presence where the business has control over the	
	content)	
B-6	Proportion of businesses with an intranet	
B-7	Proportion of businesses receiving orders over the Internet	
B-8	Proportion of businesses placing orders over the Internet	
Extended core		
B-9	Proportion of businesses accessing the Internet by modes of access	
	 Response categories should allow an aggregation to narrowband and broadband, where broadband will exclude slower speed technologies, such as dial-up modem, ISDN and most 2G mobile phone access, and which will usually result in a speed of at least 256 kbit/s. 	
B-10	Proportion of businesses with a Local Area Network (LAN)	
B-11	Proportion of businesses with an extranet	
B-12	Proportion of businesses using the Internet by type of activity	
	Response categories:	
	Internet e-mail	
	Getting information About goods or services	
	 From government organisations/public authorities via websites or e-mail 	
	 Other information searches or research activities 	
	Performing Internet banking or accessing other financial services	
	Dealing with government organisations/public authorities	
	Providing customer services	
	Delivering products online	
ICT secto	r basic core	
ICT-1	Proportion of total workforce involved in the ICT sector	
ICT-2	Value added in the ICT sector (as a percentage of total value added)	
ICT-3	ICT goods imports as percentage of total imports	
ICT-4	ICT goods exports as percentage of total exports	

Infrastructure and access core indicators

Basic core		
A-1	Fixed telephone lines per 100 inhabitants	
A-2	Mobile cellular subscribers per 100 inhabitants	
A-3	Computers per 100 inhabitants	
A-4	Internet subscribers per 100 inhabitants	
A-5	Broadband Internet subscribers per 100 inhabitants (fixed and mobile)	
A-6	International Internet bandwidth per inhabitant	
A-7	Percentage of population covered by mobile cellular telephony	
A-8	Internet access tariffs (20 hours per month), in US\$, and as a percentage of per capita income	
A-9	Mobile cellular tariffs (100 minutes of use per month), in US\$, and as a percentage of per capita income	
A-10	Percentage of localities with public Internet access centres (PIACs) by number of inhabitants	
	(rural/urban)	
Extended core		
A-11	Radio sets per 100 inhabitants	
A-12	Television sets per 100 inhabitants
