# The data gap in the Caribbean

Abdullahi Abdulkadri, Coordinator  
Statistics and Social Development Unit, ECLAC Caribbean

Workshop to accelerate SDG implementation in the Caribbean  
Port of Spain, Trinidad and Tobago , 18 May 2017

# Data as a necessary input

---

- ▶ **Planning**
  - ▶ National development plans
  - ▶ SDGs mainstreaming
  - ▶ Budgeting
- ▶ **Implementation**
  - ▶ Inform strategies/action plans
  - ▶ Guide progress
- ▶ **Monitoring and evaluation**
  - ▶ Goals and targets
  - ▶ Economic/financial evaluation

# The role of data

---

# Gaps in National Development Plans

---

- ▶ **Targets**
  - ▶ Not unambiguous
  - ▶ No associated indicators
  - ▶ Not measurable
- ▶ **Indicators**
  - ▶ No reference point
  - ▶ No baseline

## Illustration

Goal

Improve the economy through job creation

Target

Reduce youth unemployment

Indicator

Number of employed youth

## A do over

Goal

Improve the economy through job creation

Target

Reduce youth unemployment by half by 2030

Indicator

Youth unemployment rate

Baseline

Youth unemployment rate in 2017 is ??%

# Gaps in official statistics

---

- ▶ **Surveys**
  - ▶ Infrequent
  - ▶ Limited coverage
- ▶ **Administrative records**
  - ▶ Not utilized enough
  - ▶ Not managed in an integrated manner
- ▶ **Dissemination**
  - ▶ Results of census and surveys are not always timely
  - ▶ Disaggregation is crucial

# SDG Mainstreaming

---

- ▶ Alignment with National Development Plan
  - ▶ How do the SDGs correspond with national goals and priorities?
  - ▶ Which of the SDG targets are already reflected in national targets?
  - ▶ Can the country report on global indicators by producing data for national development plan indicators?

# Classification of Global SDG Indicators

---

**Tier I**

• 82 Indicators

**Tier II**

• 61 Indicators

**Tier III**

• 84 Indicators

**+5 indicators in multiple tiers**

# Status of SDG data production in Haiti (Percentage)

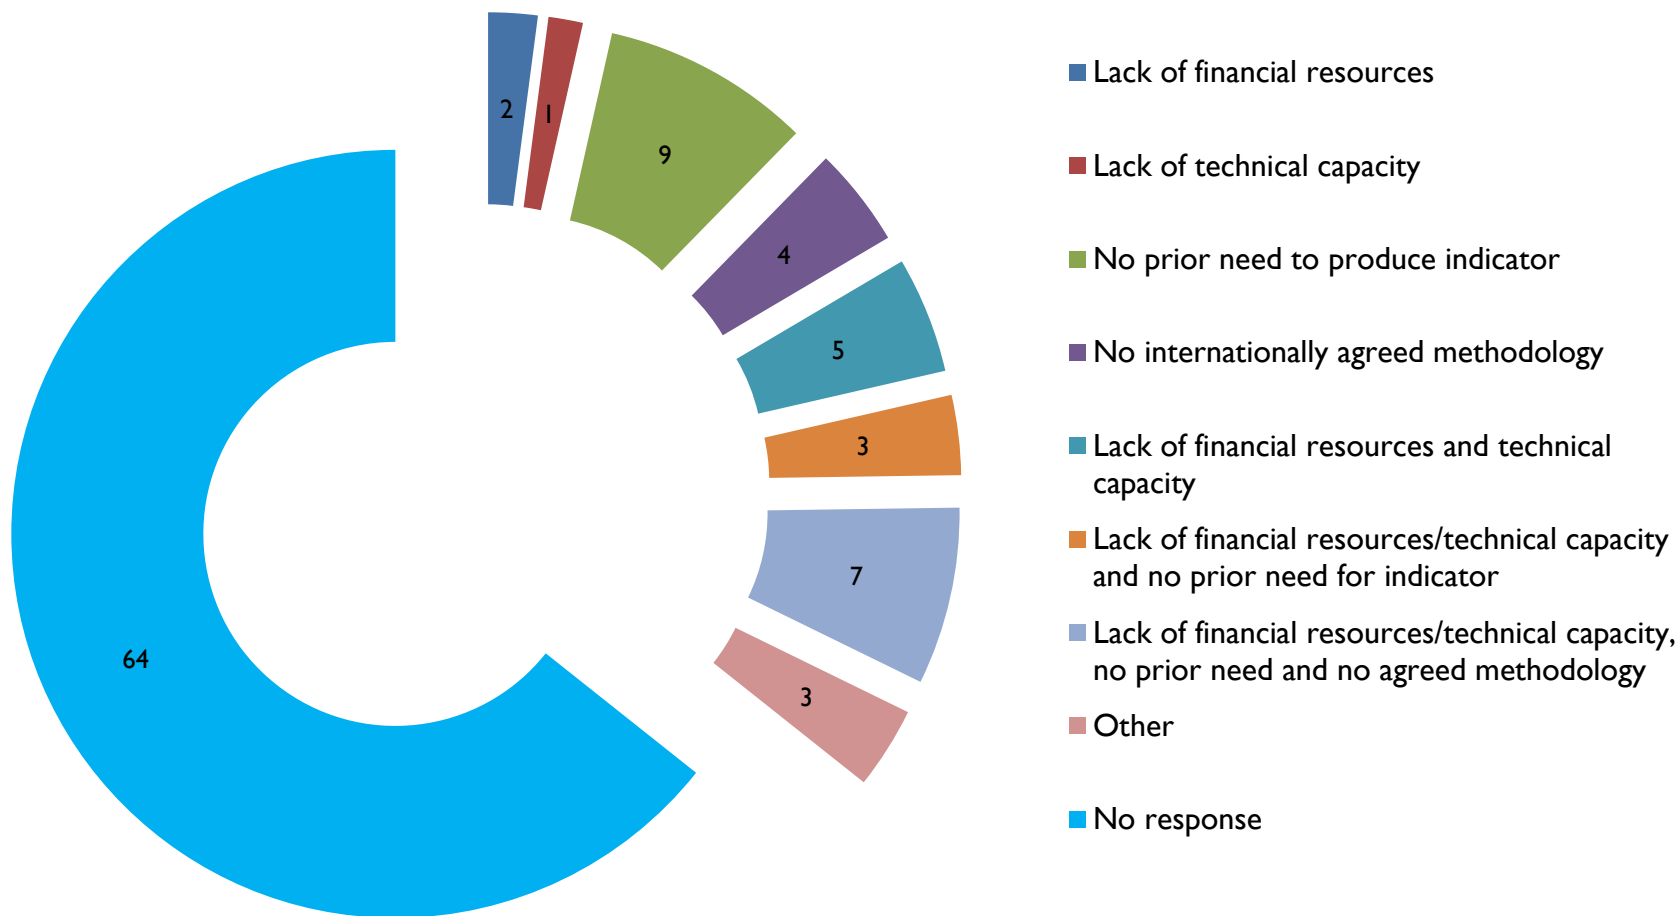

# Status of SDG data production in Jamaica (Percentage)

# Status of SDG data production in Saint Vincent and the Grenadines (Percentage)

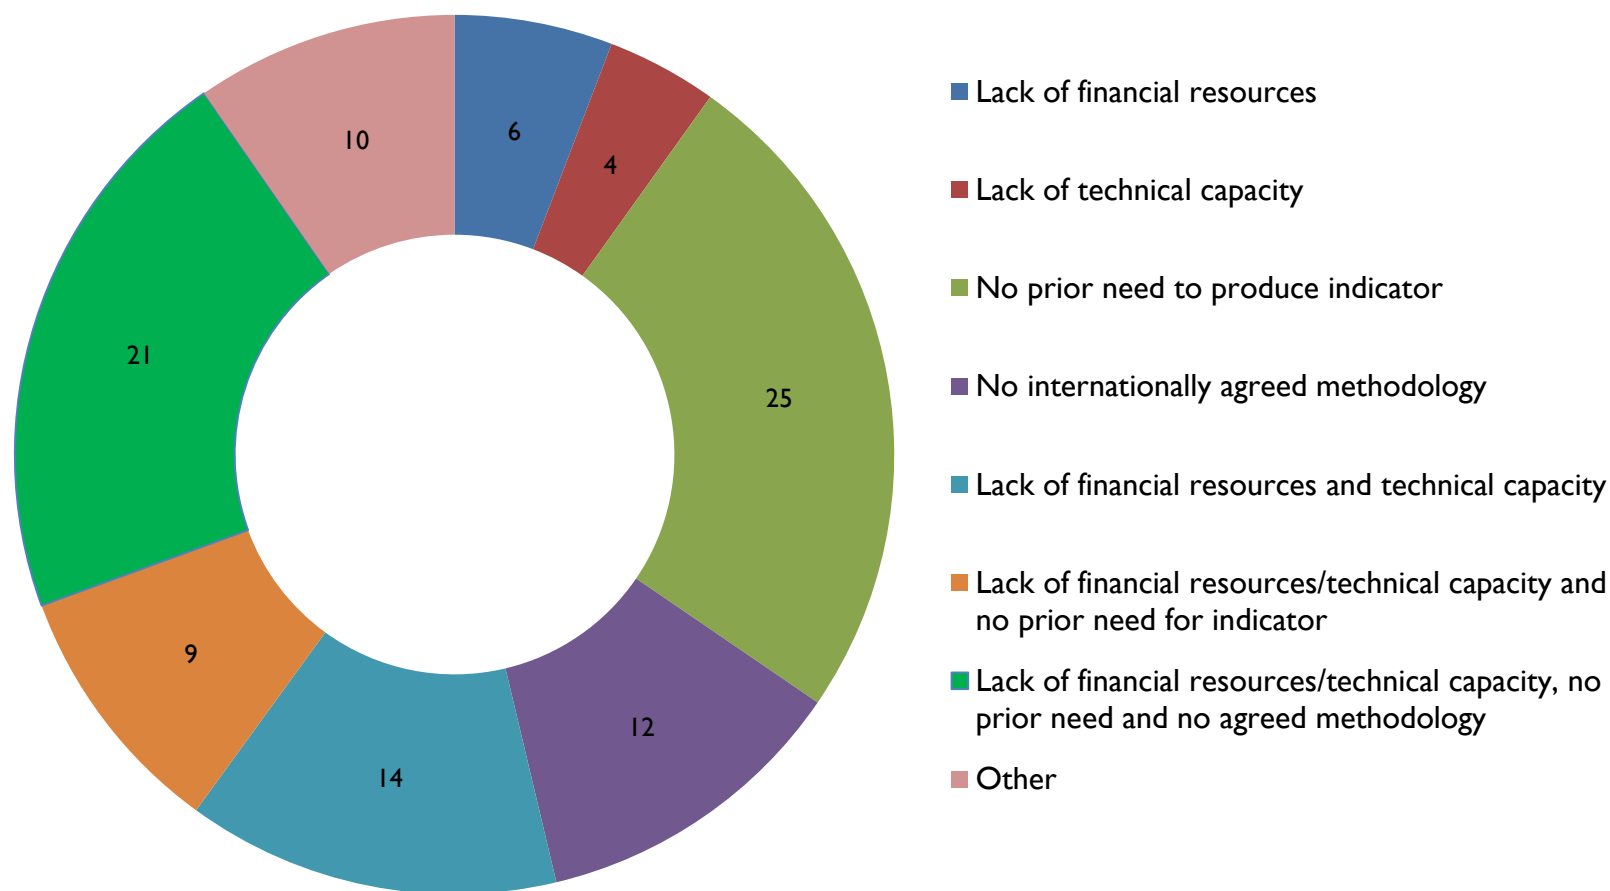

# Reasons for non-production of data by Caribbean countries (Percentage)

# Reasons for non-production of data by Caribbean countries (Percentage)

# Reasons for non-production of data by Caribbean countries (Percentage)

## Conclusions

---

- ▶ More than half of the time, lack of prior need for indicator was responsible for non-production of data
- ▶ The likelihood that indicators without data will be already reflected in national development plans is low
- ▶ Efforts need to be dedicated to those indicators that could be produced with the refinement of available data to close data gap
  - ▶ Financial resources need to be dedicated to efforts
  - ▶ Technical capacity will need to be enhanced
