The Feeding America: The Historic American Cookbook Dataset

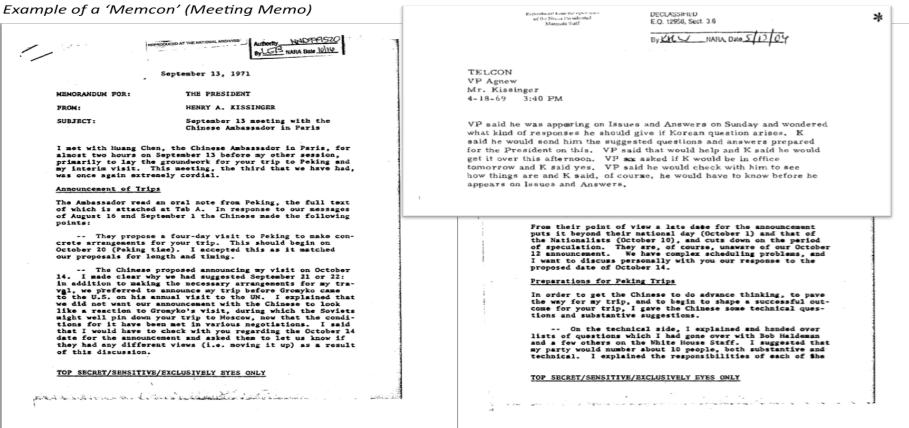

#### Description

The Feeding America: The Historic American Cookbook dataset contains transcribed and encoded text from 76 influential American cookbooks held by MSU Libraries Special Collections. Features encoded within the text include but are not limited to recipes, types of recipes, cooking implements, and ingredients. The 76 texts were chosen among more than 7000 cookbooks that MSU Libraries holds as representative of periods and themes in American cookbook history spanning the late 18th to early 20th century.

"Open source software often becomes an industry standard," Zuckerberg told investors on an earnings call on Feb. 1. "When companies standardize on building with our stack, that then becomes easier to integrate new innovations into our products."

Billy Perrigo, Yann LeCun On How An Open Source Approach Could Shape Al

### Open Language Model: OLMo

A State-of-the-Art, Truly Open LLM and Framework

## Each model comes with the following:

- Full training data used for these models, including code that produces the training data, from Al2's <u>Dolma</u>, and <u>WIMBD</u> for analyzing pretraining data.
- Full model weights, <u>training code</u>, training logs, training metrics in the form of Weights & Biases logs, and inference code.
- 500+ checkpoints per model, from every 1000 steps during the training process, available as revisions on HuggingFace.
- Evaluation code under the umbrella of Al2's Catwalk and Paloma.
- Fine-tuning code and adapted models (coming soon with <u>Open Instruct</u>)
- All code, weights, and intermediate checkpoints are released under the Apache 2.0 License.

#### Community

#### Reducing the distance between researchers and community collaborators

Our research centers lived experiences from communities which are not typically represented in AI research. We strongly believe in a bottom-up approach, supporting and prioritizing research and researchers that emerge from the communities that we center in our work and their specific needs.

#### **Interrogating Power**

#### Creating spaces for communities to question elites

Understanding why people and communities "on the margins" are broadly excluded from AI development, and how this affects all of us, requires interrogating power. Part of our work is to expand the field of inquiry to study decision makers and tech elites that have remained significantly unquestioned in AI research.

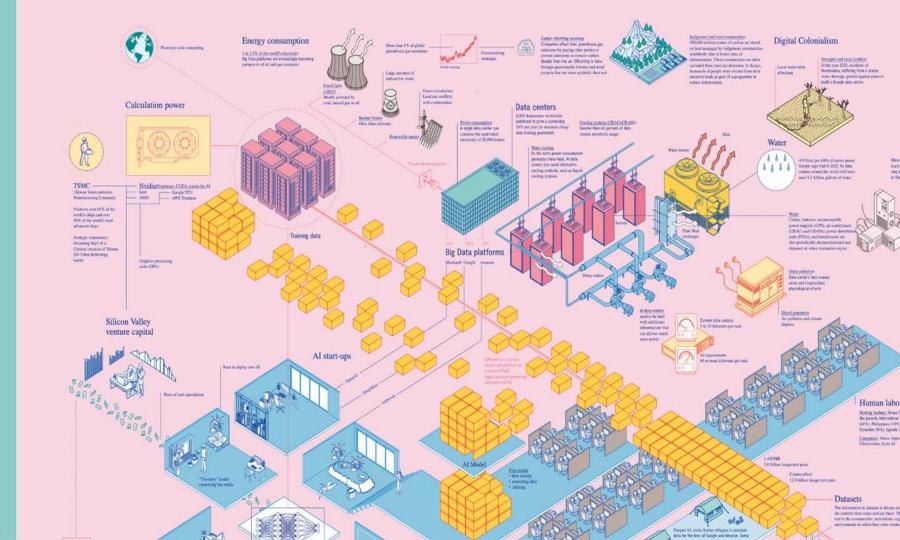

#### **Libraries & Al**

- 1. reusable 🛠 open 🛠, not 🙄 open 🙄
- 2. accountable development and use subject to specific community needs
- 3. sustainable adoption guided by stewardship mindset

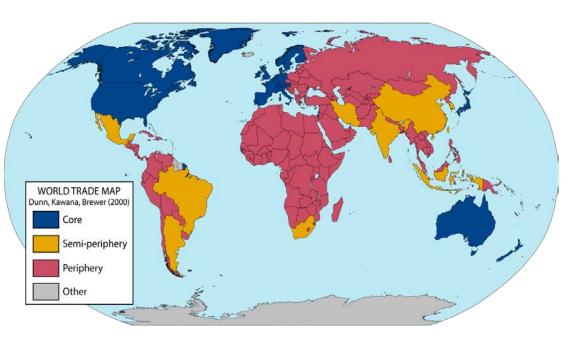

Sustainability strategy depends on awareness of interdependence, threats, and opportunities.

## Suggested methods:

- 1. Exploded view Cartography of generative Al
- 2. Systems view World Systems Theory (Wallerstein)
- 3. Replacement view AI is Automation (Bender)

Discourses on Al

- Maintained distribution of capital concretizes system roles
- Exclusivity e.g., compute
- Purgatory e.g., raw materials, training data, content moderation

# I think that discussions of this technology become much clearer when we replace the term AI with the word "automation".

#### Then we can ask:

- What is being automated?
- Who's automating it and why?
- Who benefits from that automation?
- How well does the automation work in its use case that we're considering?
- Who's being harmed?
- Who has accountability for the functioning of the automated system?
- What existing regulations already apply to the activities where the automation is being used?

Emily Bender, Opening remarks on "AI in the Workplace: New Crisis or Longstanding
