Economic Commission for Latin America and the Caribbean

First virtual meetings established under the Plan of Action to 2014 of the Declaration on the application of Principle 10 of the Rio Declaration on Environment and Development
August 6 and 9, 2013

Access to information, participation and justice in environmental matters in Latin America and the Caribbean

Sustainable Development and Human Settlements Division
PRINCIPLE 10 OF THE RIO DECLARATION (1992)

Environmental issues are best handled with participation of all concerned citizens, at the relevant level.

At the national level, each individual shall have appropriate access to information concerning the environment that is held by public authorities, including information on hazardous materials and activities in their communities, and the opportunity to participate in decision-making processes.

States shall facilitate and encourage public awareness and participation by making information widely available.

Effective access to judicial and administrative proceedings, including redress and remedy, shall be provided.

43. We underscore that broad public participation and access to information and judicial and administrative proceedings are essential to the promotion of sustainable development.

44. We recognize that improved participation of civil society depends upon, inter alia, strengthening access to information, building civil society capacity as well as an enabling environment.

99. We encourage action at regional, national, sub-national, and local levels to promote access to information, public participation, and access to justice in environmental matters, as appropriate.
"Appreciate initiatives for regional implementation of the 10th Principle of the 1992 Rio Declaration, regarding the rights of access to information, participation and environmental justice, as a significant contribution to the participation of organized community committed to Sustainable Development“. Santiago Declaration of the first CELAC Summit, January 27-28, 2013.

“…The importance of implementing Principle 10 of the 1992 Rio Declaration at the Earth Summit, and reiterate the importance of advancing initiatives in this matter.” They reiterated the right of citizens to participate in the formulation, implementation and monitoring of public policies. Declaration of the CELAC-EU Summit, January 26-27, 2013.
WHY PRINCIPLE 10?

- There is a growing recognition that access rights are a key issue for environmental protection and sustainable development. = Principle 10: better democracy, better economy and more justice

- Environmental quality is a public good and a fundamental right

- The new equation: State – productive sector – society requires:
  - **Political agreements** for a new social and intergenerational contract, with clear responsibilities, protection of rights and accountability.
  - Strengthening of **collective development culture**, based tolerance towards differences and diversity.
  - **Strategic vision of development on the long run**, which stimulates pacts among productive actors.
  - **State – as opposed to government or administration – policies.** A solid project that last through democratic institutions.
  - Value system as the basis: coherence, transparency, effectiveness, inclusion
  - **Contributes to mitigate markets and policy failures.**
AN ADDITION CONCERN IN THE REGION IS THE GROWING NUMBER OF SOCIO-ENVIRONMENTALLY RELATED CONFLICTS. THESE ARE RELATED WITH THE USE OF NATURAL RESOURCES

Causes for social conflict:
- Lack of opportunity to set out consequences not taken into account in the first stages of decision-making.
- Lack of official information about the adopted decision.

Why avoid conflict?
- Challenge legitimacy
- Save resources aimed at solving them
- Avoid damages and losses

Fuente: Observatorio LatinoAmericano de Conflicto Ambiental
PRINCIPLE 10 AND SUSTAINABLE DEVELOPMENT

- Fundamental right
- Avoid information asymmetries
- Better informed decisions
- Free prior and informed consent (FPIC)

- Improve the quality of decisions
- Balance of powers
- Social stability

- Inclusion of all citizens
- Allow to question decisions on the environment
- Expeditious judicial process that contemplates repairing environmental damage
- Impartial bodies
ACCESS RIGHTS: THE ROLE OF THE STATES

Capacity-building
- Education
- Demand generation

Information
- Environmental information definition
- Production access

Participation
- Informed
- Timely
- Effective

Justice
- Legal framework
- Impartial arbitrator
- Specialized
LAC: ACCESS TO INFORMATION, PARTICIPATION AND JUSTICE IN ENVIRONMENTAL MATTERS

- ECLAC document: “Access to information, participation and justice in environmental matters in Latin America and the Caribbean: Situation, outlook and examples of good practice”
  - Review of the laws and institutions frameworks that safeguard access to information, participation in decision making and justice in environmental matters in the 33 countries of Latin America and the Caribbean.
  - The information gathered was complemented with a questionnaire on the implementation at the national level of Principle 10 of the 1992 Rio Declaration, which was filled in by 16 countries and 10 civil society organizations.

Currently, most of the countries of the region grant access to information in their Constitutions or through specific laws.

- Access to information is guaranteed under the Constitution in 15 countries, while in 11 English speaking Caribbean countries there is a Constitutional provision for freedom to receive information.
- 18 countries have specific legislation on access to public information and 7 others are engaged in adopting or creating such legislation.
- 2 countries (Argentina and Brazil) have enacted specific laws for the regime relating to access to environmental information.

In most countries, the parameters that determine access to information on the environment are distributed between the framework law on the environment and the law on transparency.
While most environmental laws in LAC make reference to information on the environment, only 5 countries in the region (Argentina, Brazil, Chile, Mexico and Peru) contemplate in their laws and explicit definition of what is understood by information on the environment.

With regard to the production of environmental information, many countries have introduced into domestic law the obligation for a designated authority to submit information on the State of the Environment at specified intervals. These include: Belize, Bolivarian Republic of Venezuela, Chile, Guyana, Haiti, Mexico, Panama and Uruguay. In Colombia, this obligation is enshrined in the Constitution.

Another positive trend with respect to freedom of information in the region is the creation of pollutant release and transfer registers (PRTRs).
LAC REGION: STATUS OF THE CREATION OF PRTR, 2013
Twenty years on from the Earth Summit, most countries in the region have incorporated provisions on citizen participation into environmental legislation or into thematic or sectoral laws and have created a variety of citizen participation councils.

Most countries also have some degree of citizen participation in environmental impact assessments.

Citizen participation is most limited at the level of policies, plans and strategies, where it is generally at the discretion of the government.
LAC: PUBLIC PARTICIPATION IN THE EIA OF PROJECTS

- Almost all countries include some level of participation in the EIA
- Different levels of implementation
- Different platforms of participation
LAC: PUBLIC PARTICIPATION IN PLANS, POLICIES AND STRATEGIES

- Citizen participation is most limited at the level of policies, plans and strategies, where it is generally at the discretion of the government.
Countries in the region have made strides in creating and setting up specialized bodies with jurisdiction over environmental matters both with the framework of the justice system and as entities falling under ministerial or statutory bodies.

Over the last few years, legislation enacted in several of the region’s countries has offered a broader range of procedural remedies, and burgeoning jurisprudence is paving the way towards a more functional form of environmental law.
## LATIN AMERICA AND THE CARIBBEAN (19 COUNTRIES): SPECIALIZED BODIES WITH JURISDICTION OVER ENVIRONMENTAL MATTERS

<sup>a</sup> These agencies are not yet fully operational.
Countries have also made progress in establishing authorities to whom citizens can appeal if denied access to information.

- In Chile, the Transparency Committee was set up not just to promote the principle of transparency and public participation, but also to serve as an independent body to which appeals can be brought against an institutional decision to withhold information.

- In Mexico, the recent reform of the Federal Act on Transparency, Access to Public and Governmental Information and Protection of Personal Data affords the Federal Institute for Access to Information (IFAI) greater autonomy and powers similar to those of the Transparency Committee in Chile.

- In Uruguay, the Unit for Access to Public Information, while it does not have the authority to deal with complaints of refusal of information, advises citizens on their rights and the next steps to take in their defence.
The region as a whole faces similar challenges with regard to the full implementation of Principle 10.

These challenges require capacity building and education.
On the basis of a questionnaire which was answered by the governments of 16 countries in Latin America and the Caribbean and 10 civil society representatives from several countries, main capacity building needs on access rights were identified:

- Training opportunities both for public officials and general public with regard to access rights
- Education
- Exchange of good practices
LAC: TOWARDS A REGIONAL INSTRUMENT FOR THE IMPLEMENTATION OF PRINCIPLE 10

Participate from the beginning
- Taking into consideration the traits of each country and creating a sense of regional belonging.
- LAC countries share cultural bonds that may simplify negotiations and turn into an easier consensus.

Compliance
- A regional instrument will support the full implementation of Principle 10 as a State policy and just government.
- Level the field and give a clear signal to foreign investors on the commitment in the region.

Cooperation
- Better regional coordination: harmonization of competitiveness grounds.
- South South cooperation, exchange practices and capacity building.
EXAMPLES OF GOOD PRACTICES

- **Access to information:** The Federal Institute for Access to Information and Data Protection (IFAI) and the National Institute of Indigenous Languages (INALI) signed a cooperation agreement in 2011 to guarantee right of access to information for the 7 million persons who speak indigenous languages in the country, many of them as their sole language.

- **Access to public participation:** Ecuador’s legislation reflects the effort to build the capacities of groups that have traditionally been underrepresented in decision-making. Specific legislation exists that provides for the establishment of bodies for the participation of indigenous and Afro-Ecuadorian communities; the country’s environmental legislation contains provisions that operate in the same vein. Article 37 of the regulations issued under the Framework Law on the Environment states that “areas of productive forests of the State that are to be found on community lands of indigenous peoples or black people or Afro-Ecuadorians [...] shall, subject to authorization by the Ministry of the Environment and the provisions of this law, be exploited exclusively by these communities.”

- **Access to justice:** In Ecuador, Argentina and Mexico the burden of proof is reverse to the responsible of the damage, who must prove there was not such damage.
