Objectives of the Workshop

Train the participants to build selected environment, climate change and disaster indicators and its metadata.

Identify data and capacity gaps to develop an Environmental Information System (EIS) and build a regional resilience platform.

Have a better understanding of how geospatial data can enhance the use of environment, climate change and disaster indicators for effective decision making.

Expected outcomes of the Workshop

At least three prioritized climate change and disasters indicator and its metadata are available at the end of the workshop

A selection of prioritized indicators from the Global Set of Climate Change Indicators are identified for the country

Follow up steps to build further selected climate change and disasters indicators are agreed

- **Demand and priorities of indicators along the policy-making cycle**

Objective: Identify the status of the demand for statistics and indicators along the policy cycle for three main national climate change and disaster issues

- **Dissemination and sustainability of the new indicators: challenges & potential solutions**

Objective: Identify the main challenges and enablers associated with the dissemination and sustainability of the new indicators built during the workshop

- **Review the Global Set of Climate Change Indicators and select priority indicators for the country**

Objective: select those you considered more relevant for Dominica and the institution you represent.

- **Choosing the indicator to be built during the workshop**

Objective: Please select the indicator you would like to work with during the workshop

Building selected environment climate change and disasters indicators with national data

REGIONES UNIDAS

CEPAL

Various groups will be created
Worked with at least 3 indicators from
each of the UNFCCC areas

The participants are public
professionals, producers and users of
environmental statistics.

Enriching technical discussions are
expected around the exercises.

Group Work Methodology

1

Fill the Excel file with tasks related to the indicator to be developed.

2

Fill out the methodological sheet with all its details

Group feedback on the indicators build

Make representation with charts and graphs of the indicator results

Make the presentation of the indicator for the final discussion

Generating climate change and disasters indicators for policy decision-making in
Dominica

19, 20 and 21 July 2022

A teal-colored map of the Caribbean region is shown in the background. Overlaid on the map are several circular icons with dashed borders, representing various environmental and social themes: a water drop, a palm tree, a fish, a person with a red head, a recycling symbol, a gender equality symbol, a thermometer, a factory, a turtle, a wind turbine, and a wave.

Thanks for your attention
